

Clear Heater System

# HEATING REIMAGINED

**logicor**

# FORE —WORD

## David Bowen, Inventor

---

"Over 15 years ago, I set up the concept of Logicor. Logicor is now a group which has invented 48 products. It was to be an environmentally orientated research and development company looking at ways in which I could reduce fuel poverty and general energy consumption for everyone. Like all innovators I have had many different concepts and ideas with varying degrees of success from the Green Plug to the 100W Lite kettle. I had the idea over ten years ago to maximise the benefits of infrared technology, and use the heating and cooling properties of a carbon element. After a number of developments and utilising my computer background I have now developed and brought to the market the Logicor Clear Heater System to fulfil my original aims."

# SUPER- IOR

## Clever Yet Simple

---

The Logicor Clear Heater System has an impressive design both outside and in, packaged with the latest in infrared and communicational technology. They produce radiant heat with an interlinked communications concept through proven electrical wiring, giving residents comfortable temperatures and peace of mind.

# EFFICIENT

## Radiant Heat

---

Radiant Heat is multidirectional and a much more efficient way of heating an indoor space. Where traditional convection heat can lead to an uneven temperature within a room, radiant heating stores energy in physical objects instead of air, leading to a temperature difference of 0.2 degrees centigrade in a room, as opposed to 2-5 degrees centigrade that convection achieves.

# DESIR —ABLE

## Sleek & Stylish

---

The Logicor Clear Heater System takes on a fresh approach to home appliance design. Clear Heaters reimagine the purpose of a heater, not just merely keeping residents comfortable but integrating with the design and overall feel of their home.

# ADAPT —ABLE

## Integration in Spaces

Designed and manufactured to suit the user. With a range of four heaters the Logisor Clear Heater System adapts to the needs of any room and provides the solution to heating vast or modest proportion spaces.

# ADVA —NCED

## Adaptive & Responsive

---

Through an advanced control panel unit and existing building electrical wiring, the Logicoor Clear Heater System responds to the user's command and input. Set a temperature and energy is used only when necessary to constantly keep spaces at a comfort level that the user specifies.

# HEAL —THIER

## Benefits of Radiant Heat

---

Dr Masao Nakamura of the O and P Medical Clinic in Japan reports success with the use of Far Infrared Heat Treatment for the following:  
Acne, Arthritis, Ear Diseases,  
Gastroenteric problems, Insomnia,  
Menopause, Whiplash, Sciatica  
& Shoulder stiffness.

# PROTE —CTED

## Patent Protection

---

The Logica Clear Heater System is protected by worldwide patents and design protection in multiple countries for the control panels and the clear heaters.

# ASSU —RED

## Quality Assured

---

Meticulous high standards of development and production are achieved at Logicor through a quality control and assurance program that involves each heater pass rigorous tests before it is deemed of satisfactory quality. This ensures that the product is fit for purpose and will undoubtedly fulfil its potential.

# FUNCTIONAL

## Comfort & Convenience

---

The Logicor Clear Heater System empowers the user with the ability to set an overall home temperature with 'zones', separated common spaces with 'links', or by each individual heater, ensuring the utmost comfort with the most minimal of efforts.

# VERS —ATILE

## Neat & Secure

---

The Logisor Clear Heater System is secured to the desired area with a chromed base unit and circular top holders. This allows the heater to be placed in one of three areas of the wall; low, mid or high levels, ideal for both private and commercial uses.
