WELCOME

Manufacturing in Wakefield

Our Clear Heater System factory is based in Wakefield, West Yorkshire, England. Here we manufacture the range of heaters and control panels that have been in development for over 9 years to the highest standard. The factory is 30,000 square feet and houses 16 production benches.

DRIV —EN

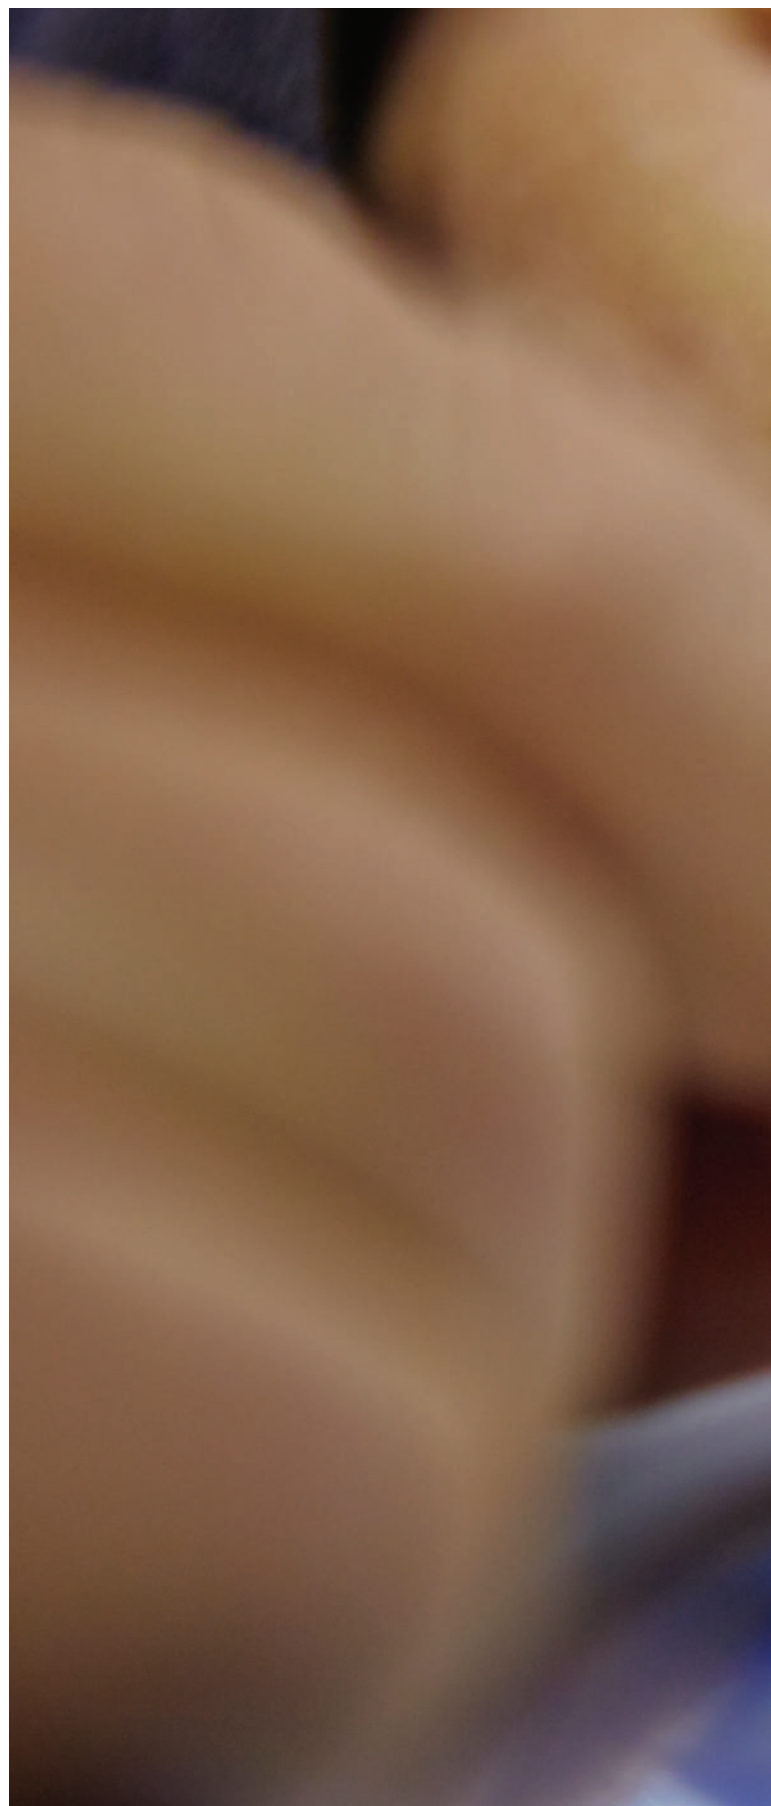

Productivity & Ambition

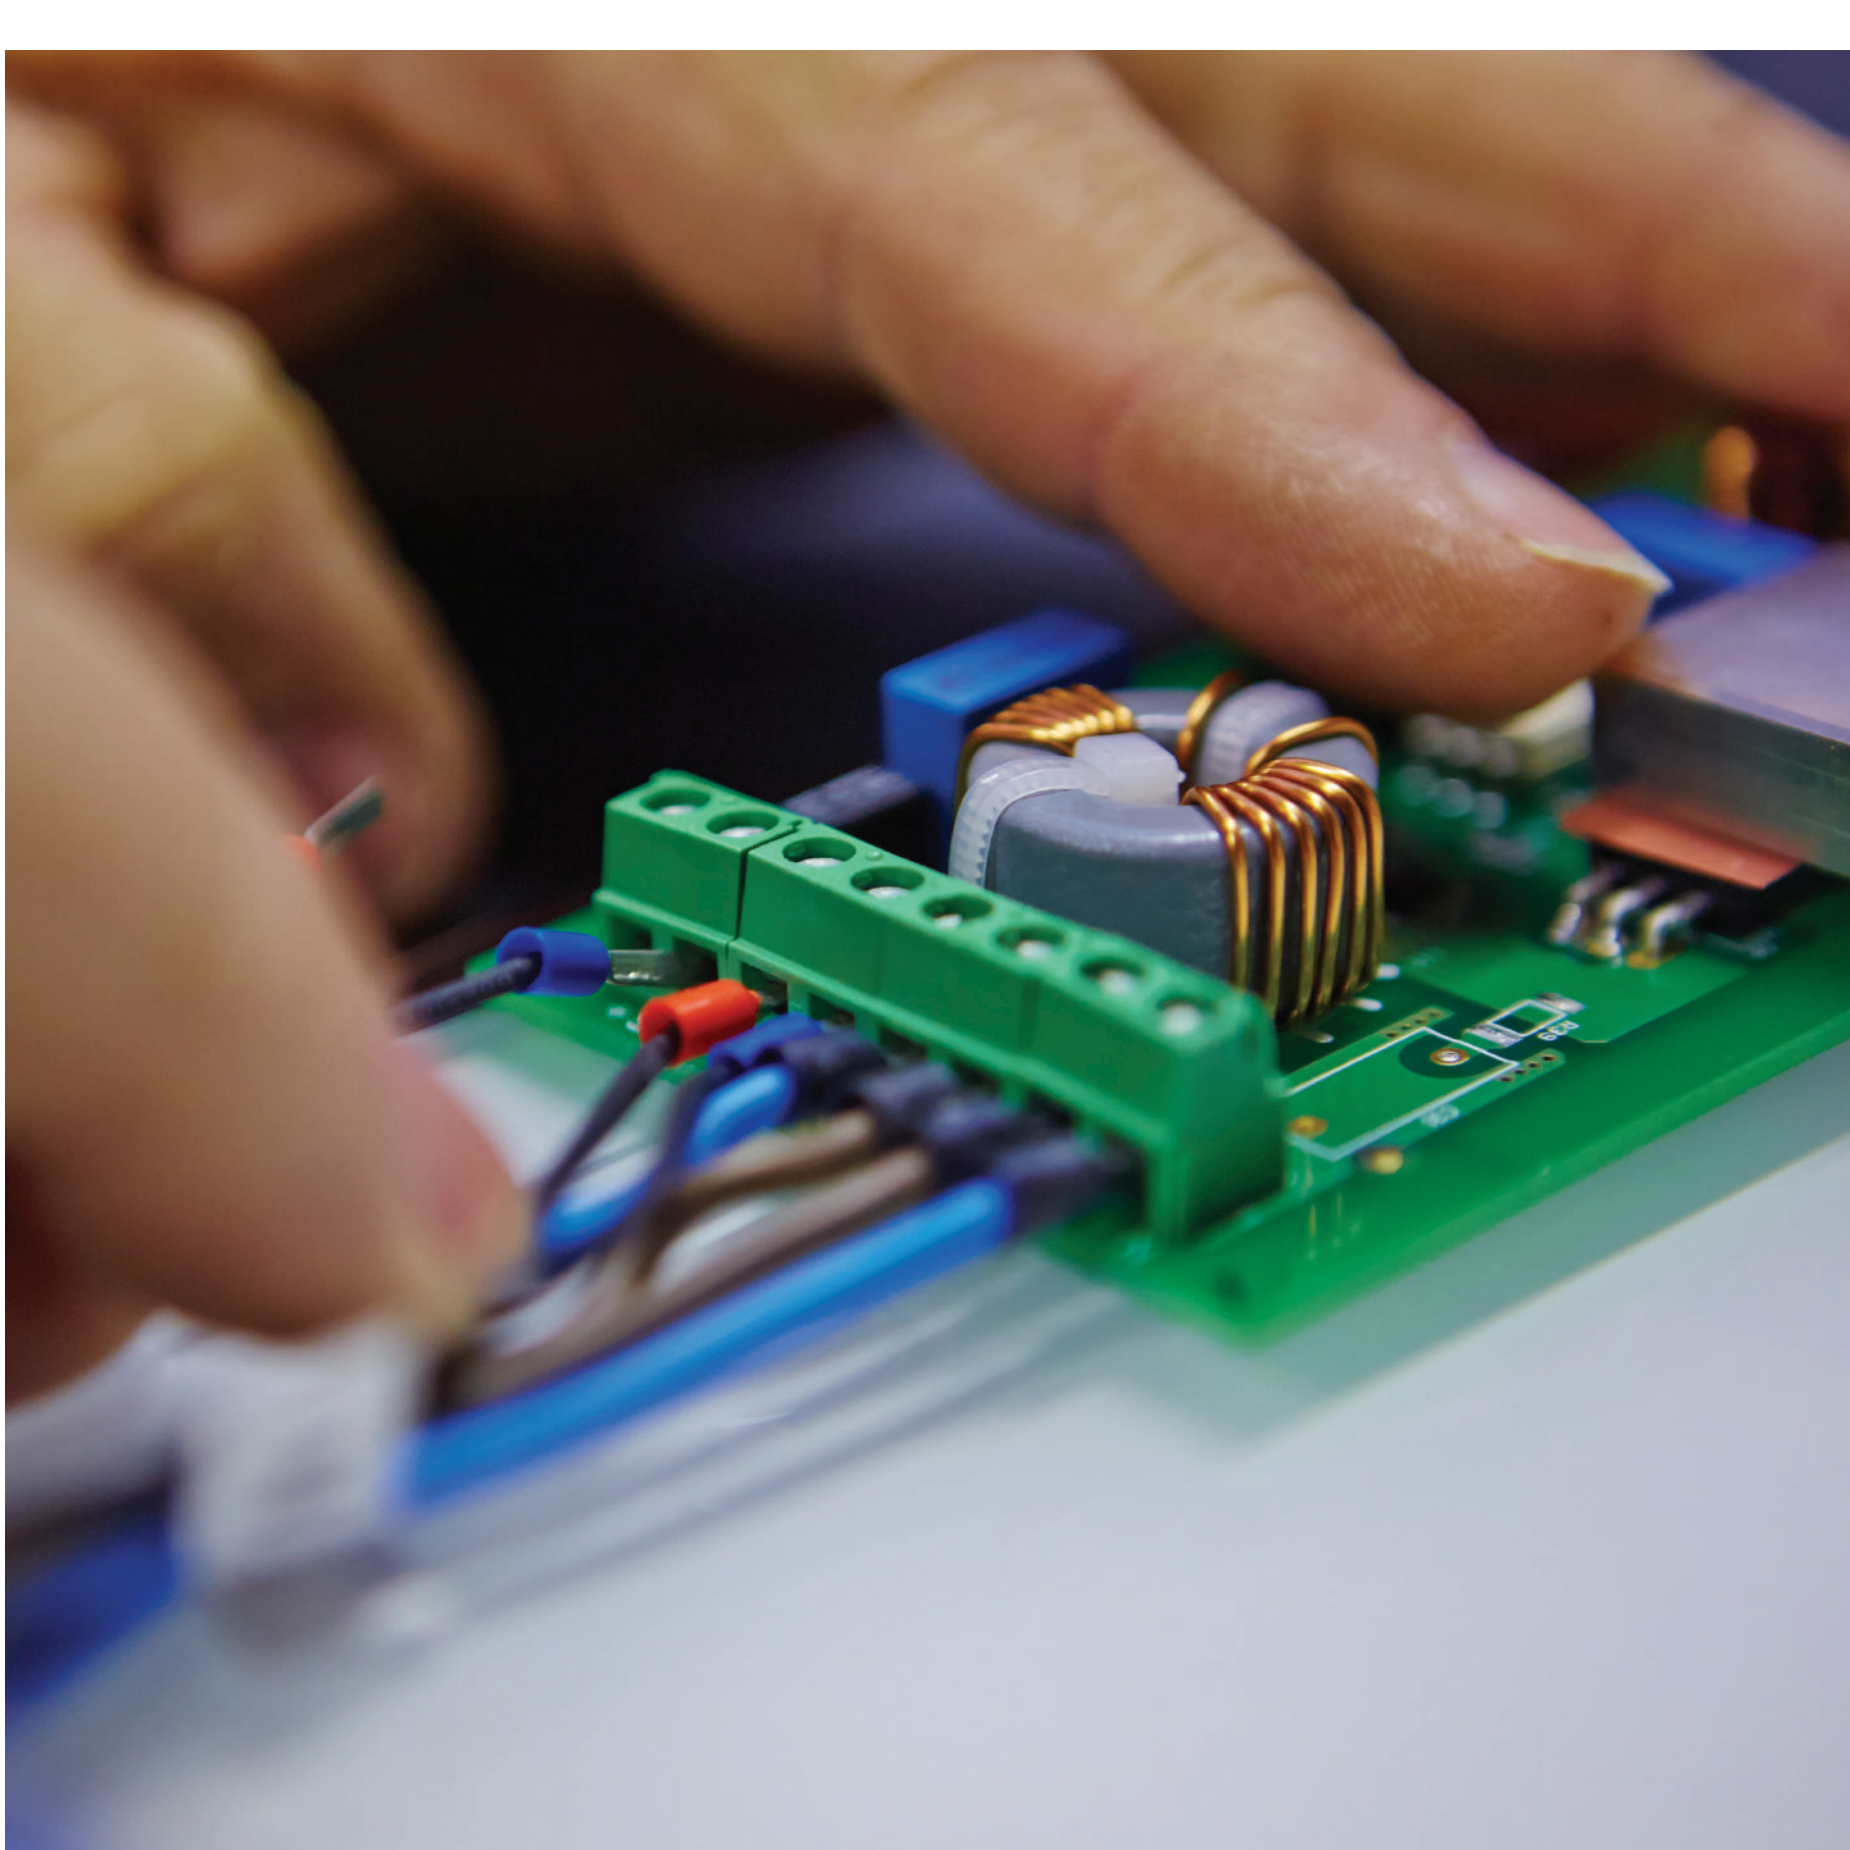

At the Wakefield CHS factory, 35 employees hand build the Clear Heater Systems and program them to the needs of the customer. Logisor aims to fulfil the capacity potential of the factory, building 50,000 systems per annum by mid- 2015.

DET —AIL

Quality Assured

The heaters are all individually tested for performance to ensure that they will meet our exacting standards. Meticulous detail is applied to the manufacturing and quality assurance process by our employees at every stage. We work to ISO9001 requirements with certification expected by early 2015.

METIC —ULOUS

Handcrafted

The Logisor Clear Heaters' components are sourced to Logisor's own precise specification, from the most complex PCB boards to the simplest yet most suitable screws. All are bespoke to ensure the Logisor Clear Heaters are manufactured to the highest possible standards.

SPECI —ALISTS

Intense Training

Each skilled employee is subjected to a rigorous 3 month training program before working directly in the production facility, ensuring quality control at every stage of the production process.

SEAM —LESS

Efficient Management

From order to despatch in five days, the Logicor Clear Heaters are tested prior to installation by the production team.

INNOV —ATORS

Further Aspirations

The Logisor Research & Development premises are also based in Wakefield, West Yorkshire, England. The 4000 square foot facility houses computer programmers, design engineers and the development team, who are constantly working on the next generation of energy saving products; from hot water heating to energy efficient light bulbs.
